ChronoDater 920/922/925 The Time specialist...

REINER presents the new ChronoDater series, a completely redesigned family of clock time stamps using the latest technology to offer more convenience and service to the customer. A fully automated mechanical print head with engraved textplate offers clear stamp imprints – not just an electronic output which could be copied easily.

This new compact design of ChronoDater saves room on desks and comes in two models. Model 920 works as an automatic date stamp. Model 925 prints both date and time. Both feature a large text plate for Logos and messages. Date and clock time work fully automatic & synchronized and require no extra settings of months and years at the end of each period. Daylight savings and leap year as well as security features like passwords and print lock are supported by this new unit. A chip card is used to identify an operator and unlock the stamp for printing. ChronoDaters are able to stamp through up to 5 copies.

The setting of the stamp is simple and is supported by a display with four buttons. The software is very easy to navigate and offers 5 languages to help support the end user.
